2 CODING STYLE

## PEPITAS NETWORK PROTOCOL

#### 2.1 HEADERS

#### 2.1.1 Sync Headers

- 1. CONNECTION TO NETWORK
- 2. CONNECTION TO NODE
- 3. GET BLOCKS
- 4. ACTUAL HEIGHT
- 5. SEND BLOCK
- 6. GET PENDING TRANSACTION LIST
- 7. REJECT DEMAND

#### 2.1.2 Running Headers

1. SEND PENDING TRANSACTION

#### 2.1.3 Validating Headers

- 1. SEND BLOCK EPOCHMAN
- 2. SEND VOTE

#### 2.1.4 CONNECTION TO NETWORK

#### Message:

• char \* : "CONNECTION TO NETWORK\r\n\r\n"

**Description** Send a request to be accepted by a network door.

#### 2.1.5 CONNECTION TO NODE

#### Message:

• char \*: "CONNECTION TO NODE\r\n\r\n"

**Description** Send a request to be accepted by a network node.

#### 2.1.6 GET BLOCKS

#### Message:

• char \* : "GET BLOCKS\r\n\r\n"

uint32\_t : P\_VERSION

• char : Number of demand (max 50)

• size\_t \* : Block height

**Description** Send a request to a server for getting blocks. If the genesis block (height 0) is demand then the number of the actual blockchain height is return with "ACTUAL HEIGHT" header. If not, SEND BLOCK or REJECT DEMAND messages are returned.

#### 2.1.7 ACTUAL HEIGHT

#### Message:

• char \* : "ACTUAL HEIGHT\r\n\r\n"

• size\_t : Block height

Description Send my actual blockchain height.

#### 2.1.8 SEND BLOCK

#### Message:

• char \*: "SEND BLOCK\r\n\r\n"

• size\_t : Block height

• size\_t : Block size

• char \* : Block struct

Description The block of height demand by "GET BLOCKS".

2.1 HEADERS 5

#### 2.1.9 GET PENDING TRANSACTION LIST

#### Message

• char \* : "GET PENDING TRANSACTION LIST\r\n\r\n"

Description Call "SEND PENDING TRANSACTION LIST".

#### 2.1.10 SEND PENDING TRANSACTION LIST

#### Message

• char \*: "GET PENDING TRANSACTION LIST\r\n\r\n"

• size\_t : Number of Transaction id

• time\_t \*: Transaction id

**Description** Send PDT list.

#### 2.1.11 REJECT DEMAND

#### Message:

• char \* : "REJECT DEMAND\r\n\r\n"

Description Reject a demand if can't reply. For example a "GET BLOCKS" of a not existing block.

#### 2.1.12 GET PENDING TRANSACTION

#### Message:

• char \*: "GET PENDING TRANSACTION\r\n\r\n"

• time\_t : Transaction id

**Description** Demand a PENDING TRANSACTION.

#### 2.1.13 SEND PENDING TRANSACTION

#### Message:

• char \*: "SEND PENDING TRANSACTION\r\n\r\n"

size\_t : Transaction id

• size\_t : Transaction struct size octet

• char \* : Transaction struct

Description Send the PENDING TRANSACTION demand by SEND PENDING TRANSACTION.

#### 2.1.14 SEND EPOCH BLOCK

#### Message:

• char \* : "SEND EPOCH BLOCK\r\n\r\n"

• int : Epoch id

• size\_t : Block height

• char \* : Block struct

**Description** Send the epoch block of a committee member.

#### 2.1.15 SEND VOTE

#### Message:

• char \* : "SEND VOTE\r\n\r\n"

• size\_t : size epoch creator pk

• char \* : Epoch creator pk

• size\_t : block height

· int : epoch\_id

• char : 0 = False 1 = True

• char \* : signature of vote precedent vars but not "SEND VOTE\r\n\r\n"

**Description** Send the vote of a committee member.

### **README**

#### 3.1 PEPITAS, a C cryptocurrency

PEPITAS is an EPITA project made in the last semester of the preparatory cycle. This cryptocurrency is based on the *proof of stake*, the new validation concensus (used in Etherum 2.0).

With PEPITAS, you can test whatever a modern proof of stake based money can do:

- · Send money
- · Receive money
- · Invest on the stake
- · Validate transactions
- · Earn transactions fees

All of these features are obviously secured by a 2048-bits RSA based protocol.

#### 3.2 Requirements

- · A Linux system (Ubuntu, Arch,...)
- · GNU Make
- · OpenSSL
- GTK

#### 3.3 Installation

- 1. Download the last version of the project: PEPITAS-Cryptocurrency.
- 2. Exctract the archive and go to the exctracted directory
- 3. Open a terminal in the current directory, type  ${\tt make}$
- 4. Go to the build directory
- 5. Execute client.elf, with an argument : the IP address of an existing client, or without argument if you are the first node of the network

8 README

#### 3.4 Some explainations about how the program works

When launched, the client will try to connect to the host you provided as an argument (if provided). In the case where no argument are given to the ELF program, the client will try to etablish a connect to a *serverdoor* (a node which have executed the program <code>serverdoor.elf</code>). A serverdoor is a program that provides IP addresses to a node in order to let him have a connection with the corresponding hosts.

NB: serverdoors IP adresses are stored in the HARD\_CODED\_ADDR macro in src/core/network/network.c and may not work if Maxence and/or Nathan decide to close the non-localhost serverdoor (currently hosted in a Google Cloud instance). If you really want to use a serverdoor, you also can refactor the HARD\_CODED\_ADDR macro and then run the program serverdoor.elf

If you want more information about the peer-to-peer or the validation protocol, you also can read the P2P\_PROTOCOL.md) or the VALIDATION\_PROTOCOL.md documentation.

Also, don't hesitate to check our Doxygen code documentation!

#### 3.4.1 Contributors

- Nathan RABET, project leader, in charge of the blockchain and the validation protocol.
- Maxence ODEN, in charge of the networking and cryptographic part of this project.
- Souleymane SENTICI, responsible for the user interface.
- Luca SAINGIER, responsible for the web implementation.

### PEPITAS VALIDATION PROTOCOL

#### 4.1 Prerequisites

To understand this documentation, you need to have a good understanding of the blockchain data structure used in cryptocurrencies and the concept of the proof of stake.

#### 4.2 Introduction

PEPITAS is a C written cryptocurrency. At the beginning of cryptocurrencies, the method (or concensus) used to guarantee the network security was the *proof of work*, users computers had to calculate some hashes to validate transactions (also called *mining*). These calculations ensure a good security,but are not eco-frendly (because of the huge amount of CPU's and GPU's in charge of calculating hashes). This issue enrolled a new concensus: the *proof of stake*. This type of validation protocol doesn't use calculations to prove a transaction validity, but the money users putted in a bank, named the *stake*. The more a user send money to the stake, the more he has a chance to be selected to create a new block, and by the time, to earn money as a reward. It is important to note that if the other users of the network detect that a validator validated fraudulent transactions, the corresponding validator will lose some part of his stake. This punishment ensure that all users have more interest to validate valid transactions instead of fraudulent ones.

#### 4.3 Definitions

#### 4.3.1 VALIDATOR

Members of the network who can validate and create block. Each of there **STAKE** must contains at least \$50\$ PEPITAS.

#### 4.3.2 COMMITTEE

A list containing public keys, correpsonding to some accounts on the network. Each account in this list is allowed to participate to the validation and the creation of a new block for the blockchain network. A committee is pseudorandomly selected and is known by every node of the network. It changes every time a block is added to the blockchain. The more a user puts money in his stake, the more he has a chance to appear and have a low ID in a committee.

#### 4.3.3 EPOCH MAN

The committee (list) ID of the block creator. The EPOCH MAN is selected by priority order in a committee with this rule: \$min(awaken\_validator\_ID)\$ For example if the committee contains 10 members and the first awaken member is the third, EPOCH MAN is the third member of this comitte. An awaken member is a committee member who broadcast a block to the network or a committee member that send a verdict on a broadcasted block.

#### 4.3.4 COMITAL

If the committee contains \$n\$ members and the selected EPOCH MAN is the validator with the ID \$m\$, the comital members ID are from \$0\$ to \$m\$ (excluded) and from \$m+1\$ to \$n\$ (excluded).

#### 4.3.5 VOTE

A vote is a validator judgment about a the validity of a certain block. If a validator think that a block is valid, he will send a **postive** vote, otherwise, he will send a **negative** one. Note that the block at height \$0\$ (genesis block) is considered as valid by default.

#### 4.3.6 PLÈBE

All non-validators members. Each of there **STAKE** are under \$50\$ PEPITAS.

#### 4.3.7 MEMPOOL

A directory where all pending transactions (transactions that are not in a block) are stocked.

#### 4.4 How EPOCH MAN creates a block

Lets admit that the current validated block is at height \$n\$.

To create a block, EPOCH MAN do several things :

#### 4.4.1 Last block validity checking

- First, he creates a new empty block (at height \$n+1\$).
- Then, he check if the validators votes ratio of the block at height \$n\$.
  - If the block at height \$n\$ has more positive than negative votes.
    - \* Writes on the block at height \$n+1\$ that the block at height \$n\$ is valid.
    - \* Flushes the transactions in the block at height \$n\$ from the mempool.
  - Else
    - \* Writes on the block at height \$n+1\$ that the block at height \$n\$ is not valid.

#### 4.4.2 Rewards and punishments attribution

To motivate the network to do the job correctly (without corruption), EPOCH MAN will create new special transactions called *rewards* and *punishments*. Rewards are transactions that "\*send\*" money to a validator (actually this transaction creates money) and punishments that *take of* money from a validator (this transaction delete money from an account). Before this step, EPOCH MAN checked the validators votes ratio of the block at height \$n\$, then, he will create rewards transactions for the majority and punishments for the others. If there is equality on votes, the block is considered as non-valid and the same rule is applied.

#### 4.4.3 Broadcast

After all these steps, EPOCH MAN broadcasts his new block.

#### 4.5 How COMITAL send their verdicts

- 1. A validator waits for a block from a validator that has a lower ID than him in the next committee. If it receive one, he will start computing it.
- 2. Verify the validity of the received block.
- 3. Send a verdict.
- 4. Reiterate if the validator receive a block from another EPOCH MAN with an ID lower than the previous EPOCH MAN, for a certain amount of time.

Note that if a member of the COMITAL doesn't send any verdict, he will be punished by the next EPOCH MAN.

#### 4.6 How PLÈBE adhere blocks

- 1. A node waits for a block from a validator
- 2. Adhere all verdicts from the next committee
- 3. Reiterate for a certain amount of time, using the same rule as the COMITAL.
- 4. Keep the received block
- 5. If the previous block is valid (info stored in the received block), then flushes the transactions in the previous block from the mempool.

# **Chapter 8**

# **Data Structure Documentation**

# 8.1 Block Struct Reference

#include <block.h>

Collaboration diagram for Block:

#### **Data Fields**

- uint16\_t chunk\_id
- BlockData block\_data
- char block\_signature [256]
- char validators\_votes [NB\_VOTES\_BITMAP]
- char vote\_signature [MAX\_VALIDATORS\_PER\_BLOCK 1][256]

# 8.1.1 Detailed Description

Definition at line 80 of file block.h.

# 8.1.2 Field Documentation

# 8.1.2.1 block\_data

BlockData block\_data

Definition at line 83 of file block.h.

#### 8.1.2.2 block\_signature

char block\_signature[256]

Definition at line 85 of file block.h.

#### 8.1.2.3 chunk id

```
uint16_t chunk_id
```

Definition at line 82 of file block.h.

## 8.1.2.4 validators\_votes

```
char validators_votes[NB_VOTES_BITMAP]
```

Definition at line 88 of file block.h.

#### 8.1.2.5 vote\_signature

```
char vote_signature[MAX_VALIDATORS_PER_BLOCK - 1][256]
```

Definition at line 89 of file block.h.

The documentation for this struct was generated from the following file:

• /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/blockchain/block.h

# 8.2 BlockData Struct Reference

```
#include <block.h>
```

Collaboration diagram for BlockData:

# **Data Fields**

- char magic
- · int epoch\_id
- char is\_prev\_block\_valid
- char previous\_block\_hash [SHA384\_DIGEST\_LENGTH \*2+1]
- size\_t height
- uint16\_t nb\_transactions
- Transaction \*\* transactions
- · int nb validators
- RSA \* validators\_public\_keys [MAX\_VALIDATORS\_PER\_BLOCK]
- time\_t block\_timestamp
- char prev\_validators\_votes [NB\_VOTES\_BITMAP]

# 8.2.1 Detailed Description

Definition at line 61 of file block.h.

#### 8.2.2 Field Documentation

# 8.2.2.1 block\_timestamp

time\_t block\_timestamp

Definition at line 75 of file block.h.

# 8.2.2.2 epoch\_id

int epoch\_id

Definition at line 64 of file block.h.

# 8.2.2.3 height

size\_t height

Definition at line 67 of file block.h.

#### 8.2.2.4 is\_prev\_block\_valid

char is\_prev\_block\_valid

Definition at line 65 of file block.h.

# 8.2.2.5 magic

char magic

Definition at line 63 of file block.h.

#### 8.2.2.6 nb\_transactions

uint16\_t nb\_transactions

Definition at line 69 of file block.h.

# 8.2.2.7 nb\_validators

int nb\_validators

Definition at line 73 of file block.h.

# 8.2.2.8 prev\_validators\_votes

char prev\_validators\_votes[NB\_VOTES\_BITMAP]

Definition at line 77 of file block.h.

#### 8.2.2.9 previous\_block\_hash

char previous\_block\_hash[SHA384\_DIGEST\_LENGTH \*2+1]

Definition at line 66 of file block.h.

# 8.2.2.10 transactions

Transaction\*\* transactions

Definition at line 70 of file block.h.

## 8.2.2.11 validators\_public\_keys

RSA\* validators\_public\_keys[MAX\_VALIDATORS\_PER\_BLOCK]

Definition at line 74 of file block.h.

The documentation for this struct was generated from the following file:

• /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/blockchain/block.h

# 8.3 blockinfo Struct Reference

#include <ui.h>

#### **Data Fields**

- size\_t height
- size\_t transactions

# 8.3.1 Detailed Description

Definition at line 26 of file ui.h.

#### 8.3.2 Field Documentation

#### 8.3.2.1 height

size\_t height

Definition at line 28 of file ui.h.

#### 8.3.2.2 transactions

size\_t transactions

Definition at line 29 of file ui.h.

The documentation for this struct was generated from the following file:

• /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/ui/ui.h

# 8.4 ChunkBlockchain Struct Reference

#include <block.h>

Collaboration diagram for ChunkBlockchain:

- size\_t chunk\_nb
- Block \*\* chunk
- int16\_t nb\_blocks

# 8.4.1 Detailed Description

Definition at line 92 of file block.h.

# 8.4.2 Field Documentation

#### 8.4.2.1 chunk

Block\*\* chunk

Definition at line 95 of file block.h.

#### 8.4.2.2 chunk\_nb

size\_t chunk\_nb

Definition at line 94 of file block.h.

#### 8.4.2.3 nb\_blocks

int16\_t nb\_blocks

Definition at line 96 of file block.h.

The documentation for this struct was generated from the following file:

• /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/blockchain/block.h

# 8.5 connection Struct Reference

#include <network.h>

- pthread\_t thread
- sem\_t lock
- · int demand
- int clientfd
- size\_t Payloadsize
- void \* Payload
- size\_t actual\_client\_height

# 8.5.1 Detailed Description

Definition at line 44 of file network.h.

# 8.5.2 Field Documentation

# 8.5.2.1 actual\_client\_height

size\_t actual\_client\_height

Definition at line 52 of file network.h.

# 8.5.2.2 clientfd

int clientfd

Definition at line 49 of file network.h.

#### 8.5.2.3 demand

int demand

Definition at line 48 of file network.h.

## 8.5.2.4 lock

sem\_t lock

Definition at line 47 of file network.h.

#### 8.5.2.5 Payload

void\* Payload

Definition at line 51 of file network.h.

# 8.5.2.6 Payloadsize

```
size_t Payloadsize
```

Definition at line 50 of file network.h.

#### 8.5.2.7 thread

pthread\_t thread

Definition at line 46 of file network.h.

The documentation for this struct was generated from the following file:

• /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/network/network.h

# 8.6 infos\_st Struct Reference

```
#include <network.h>
```

#### **Data Fields**

- char as\_epoch
- char is\_validator
- int validator\_id
- size\_t actual\_height
- size\_t pdt
- char serv\_type
- char is\_sychronize

# 8.6.1 Detailed Description

Definition at line 55 of file network.h.

# 8.6.2 Field Documentation

# 8.6.2.1 actual\_height

size\_t actual\_height

Definition at line 60 of file network.h.

# 8.6.2.2 as\_epoch

char as\_epoch

Definition at line 57 of file network.h.

# 8.6.2.3 is\_sychronize

char is\_sychronize

Definition at line 10 of file unit\_testing.c.

# 8.6.2.4 is\_validator

char is\_validator

Definition at line 58 of file network.h.

# 8.6.2.5 pdt

size\_t pdt

Definition at line 61 of file network.h.

# 8.6.2.6 serv\_type

char serv\_type

Definition at line 62 of file network.h.

#### 8.6.2.7 validator\_id

int validator\_id

Definition at line 59 of file network.h.

The documentation for this struct was generated from the following files:

- · /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/network.h
- /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/tests/unit\_testing.c

# 8.7 Neighbour Struct Reference

#include <network.h>

#### **Data Fields**

- · int family
- char \* hostname

# 8.7.1 Detailed Description

Definition at line 33 of file network.h.

# 8.7.2 Field Documentation

#### 8.7.2.1 family

int family

Definition at line 35 of file network.h.

8.8 Node Struct Reference 29

#### 8.7.2.2 hostname

char\* hostname

Definition at line 36 of file network.h.

The documentation for this struct was generated from the following file:

• /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/network/network.h

# 8.8 Node Struct Reference

```
#include <network.h>
```

Collaboration diagram for Node:

#### **Data Fields**

• Neighbour \* neighbours

# 8.8.1 Detailed Description

Definition at line 39 of file network.h.

# 8.8.2 Field Documentation

#### 8.8.2.1 neighbours

Neighbour\* neighbours

Definition at line 41 of file network.h.

The documentation for this struct was generated from the following file:

· /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/network.h

# 8.9 th\_arg Struct Reference

#include <network.h>

Collaboration diagram for th\_arg:

- infos\_st \* infos
- connection \* client\_con

# 8.9.1 Detailed Description

Definition at line 64 of file network.h.

# 8.9.2 Field Documentation

# 8.9.2.1 client\_con

```
connection* client_con
```

Definition at line 67 of file network.h.

#### 8.9.2.2 infos

```
infos_st* infos
```

Definition at line 66 of file network.h.

The documentation for this struct was generated from the following file:

 $\bullet \ \ / home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/network/network.h$ 

# 8.10 Transaction Struct Reference

```
#include <block.h>
```

Collaboration diagram for Transaction:

## **Data Fields**

- · TransactionData transaction data
- char transaction\_signature [256]

# 8.10.1 Detailed Description

Definition at line 51 of file block.h.

#### 8.10.2 Field Documentation

#### 8.10.2.1 transaction\_data

TransactionData transaction\_data

Definition at line 53 of file block.h.

#### 8.10.2.2 transaction\_signature

char transaction\_signature

Definition at line 55 of file block.h.

The documentation for this struct was generated from the following files:

- · /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/blockchain/block.h
- $\bullet \ \ / home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/blockchain/transaction.h$

# 8.11 TransactionData Struct Reference

#include <block.h>

#### **Data Fields**

- char magic
- char type
- RSA \* sender\_public\_key
- RSA \* receiver\_public\_key
- size\_t amount
- size\_t sender\_remaining\_money
- size\_t receiver\_remaining\_money
- time\_t transaction\_timestamp
- char cause [512]
- char asset [512]

# 8.11.1 Detailed Description

Definition at line 32 of file block.h.

# 8.11.2 Field Documentation

Definition at line 39 of file block.h.

8.11.2.1 amount
size_t amount
Definition at line 40 of file block.h.
8.11.2.2 asset
char asset
Definition at line 48 of file block.h.
8.11.2.3 cause
char cause
Definition at line 47 of file block.h.
8.11.2.4 magic
char magic
Definition at line 34 of file block.h.
8.11.2.5 receiver_public_key
RSA * receiver_public_key

#### 8.11.2.6 receiver\_remaining\_money

size\_t receiver\_remaining\_money

Definition at line 42 of file block.h.

#### 8.11.2.7 sender\_public\_key

RSA \* sender\_public\_key

Definition at line 38 of file block.h.

## 8.11.2.8 sender\_remaining\_money

size\_t sender\_remaining\_money

Definition at line 41 of file block.h.

# 8.11.2.9 transaction\_timestamp

time\_t transaction\_timestamp

Definition at line 43 of file block.h.

#### 8.11.2.10 type

char type

Definition at line 35 of file block.h.

The documentation for this struct was generated from the following files:

- /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/blockchain/block.h
- /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/blockchain/transaction.h

# 8.12 validators\_state\_header Struct Reference

#include <validators.h>

- size\_t nb\_validators
- size\_t total\_stake
- · size\_t block\_height\_validity

# 8.12.1 Detailed Description

Definition at line 14 of file validators.h.

# 8.12.2 Field Documentation

#### 8.12.2.1 block\_height\_validity

```
size_t block_height_validity
```

Definition at line 18 of file validators.h.

#### 8.12.2.2 nb\_validators

```
size_t nb_validators
```

Definition at line 16 of file validators.h.

#### 8.12.2.3 total\_stake

```
size_t total_stake
```

Definition at line 17 of file validators.h.

The documentation for this struct was generated from the following file:

• /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/validation/validators.h

# 8.13 validators\_state\_item Struct Reference

#include <validators.h>

- char validator\_pkey [RSA\_KEY\_SIZE]
- size\_t user\_stake
- size\_t validator\_power

# 8.13.1 Detailed Description

Definition at line 21 of file validators.h.

# 8.13.2 Field Documentation

#### 8.13.2.1 user\_stake

size\_t user\_stake

Definition at line 24 of file validators.h.

#### 8.13.2.2 validator\_pkey

char validator\_pkey[RSA\_KEY\_SIZE]

Definition at line 23 of file validators.h.

# 8.13.2.3 validator\_power

size\_t validator\_power

Definition at line 25 of file validators.h.

The documentation for this struct was generated from the following file:

· /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-Cryptocurrency/headers/validation/validators.h

# 8.14 Wallet Struct Reference

#include <wallet.h>

- RSA \* priv\_key
- RSA \* pub\_key
- size\_t amount
- size\_t stake\_amount

# 8.14.1 Detailed Description

Definition at line 10 of file wallet.h.

#### 8.14.2 Field Documentation

#### 8.14.2.1 amount

```
size_t amount
```

Definition at line 15 of file wallet.h.

## 8.14.2.2 priv\_key

```
RSA* priv_key
```

Definition at line 12 of file wallet.h.

# 8.14.2.3 pub\_key

```
RSA* pub_key
```

Definition at line 13 of file wallet.h.

#### 8.14.2.4 stake\_amount

```
size_t stake_amount
```

Definition at line 16 of file wallet.h.

The documentation for this struct was generated from the following file:

```

Include dependency graph for blockchain\_header.h: This graph shows which files directly or indirectly include this file:

# **Functions**

• void gen\_blockchain\_header (infos\_st \*infos)

Generate block shared information.

• size\_t get\_receiver\_remaining\_money (infos\_st \*infos, RSA \*receiver\_public\_key)

Get the receiver remaining money.

## 9.3.1 Function Documentation

#### 9.3.1.1 gen\_blockchain\_header()

Generate block shared information.

# **Deprecated**

#### **Parameters**

|--|

Definition at line 9 of file blockchain\_header.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.3.1.2 get\_receiver\_remaining\_money()

Get the receiver remaining money.

#### **Parameters**

infos	Threads shared information
receiver public key	The RSA public key of the receiver

```
size_t
```

Definition at line 40 of file blockchain header.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.4 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/headers/blockchain/transaction.h File Reference

```

Include dependency graph for transaction.h: This graph shows which files directly or indirectly include this file:

#### **Data Structures**

- struct TransactionData
- struct Transaction

#### **Macros**

```
#define TRANSACTION_DATA_SIZE sizeof(size_t) * 3 + sizeof(time_t) + (512 * 2)
#define TRANSACTION_SIZE sizeof(size_t) + 2048 + TRANSACTION_DATA_SIZE
#define T_TYPE_DEFAULT 0
#define T_TYPE_ADD_STAKE 1
#define T_TYPE_WITHDRAW_STAKE 2
#define T_TYPE_REWARD_STAKE 3
#define T_TYPE_PUNISH_STAKE 4
#define TRANS_T
```

#### **Typedefs**

- · typedef struct TransactionData TransactionData
- typedef struct Transaction Transaction

40 File Documentation

#### **Functions**

int send\_money (size\_t amount, u\_int64\_t receiver\_public\_key)

Send 'amount' money to 'receiver\_public\_key'. This will broadcast a transaction to the network.

• void write transactiondata (TransactionData \*transaction, int fd)

Serialize a TransactionData\* structure.

void write\_transaction (Transaction \*transaction, int fd)

Serialize a Transaction\* structure.

void get\_transaction\_data (Transaction \*trans, char \*\*buff, size\_t \*index)

Get the transaction data object.

· void convert data to transactiondata (TransactionData \*transactiondata, int fd)

Convert serialized TransactionData\* to TransactionData\*.

void load\_transaction (Transaction \*transaction, int fd)

Load a serialized Transaction\* structure.

Transaction \* load\_pending\_transaction (time\_t timestamp)

Load a transaction in the pending transaction (pdt) directory.

void add pending transaction (Transaction \*transaction)

Add a transaction to the pending transaction (pdt) directory.

Transaction create\_new\_transaction (infos\_st \*infos, char type, RSA \*receiver\_public\_key, size\_t amount, char cause[512], char asset[512])

Create a new transaction.

void flush pending transactions (Transaction \*\*transactions, size t nb transactions)

Delete block transactions in the pending transaction (pdt) directory if the block is valid.

#### 9.4.1 Macro Definition Documentation

#### 9.4.1.1 T\_TYPE\_ADD\_STAKE

```
#define T_TYPE_ADD_STAKE 1
```

Definition at line 22 of file transaction.h.

### 9.4.1.2 T\_TYPE\_DEFAULT

```
#define T_TYPE_DEFAULT 0
```

Definition at line 21 of file transaction.h.

#### 9.4.1.3 T TYPE PUNISH STAKE

```
#define T_TYPE_PUNISH_STAKE 4

```

Definition at line 18 of file transaction.h.

#### 9.4.1.8 TRANSACTION\_SIZE

```
#define TRANSACTION_SIZE sizeof(size_t) + 2048 + TRANSACTION_DATA_SIZE
```

Definition at line 19 of file transaction.h.

# 9.4.2 Typedef Documentation

#### 9.4.2.1 Transaction

typedef struct Transaction Transaction

42 File Documentation

#### 9.4.2.2 TransactionData

```
typedef struct TransactionData TransactionData
```

# 9.4.3 Function Documentation

# 9.4.3.1 add\_pending\_transaction()

Add a transaction to the pending transaction (pdt) directory.

#### **Parameters**

transaction	The transaction to add
-------------	------------------------

Definition at line 140 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.4.3.2 convert\_data\_to\_transactiondata()

Convert serialized TransactionData\* to TransactionData\*.

# **Parameters**

transactiondata	The returned TransactionData*
fd	The serialized TransactionData FD

Definition at line 88 of file transaction.c.

Here is the caller graph for this function:

# 9.4.3.3 create\_new\_transaction()

```
Transaction create_new_transaction (
                infos_st * infos,
                char type,
                 RSA * receiver_public_key,
                 size_t amount,
```

```
char cause[512],
char asset[512] )
```

Create a new transaction.

#### **Parameters**

infos	Shared information object
type	The type of transaction
receiver_public_key	The receiver pkey
amount	The amount of PEPITAS
cause	The cause (deprecated)
asset	The asset (deprecated)

#### Returns

#### **Transaction**

Definition at line 157 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.4.3.4 flush\_pending\_transactions()

Delete block transactions in the pending transaction (pdt) directory if the block is valid.

#### **Parameters**

transactions	block.blockdata.transactions
nb_transactions	number of transactions

Definition at line 204 of file transaction.c.

#### 9.4.3.5 get\_transaction\_data()

Get the transaction data object.

44 File Documentation

#### **Parameters**

trans	The returned transaction
buff	The buffer with the serialized data
index The buffer starting offset	

Definition at line 40 of file transaction.c.

Here is the caller graph for this function:

# 9.4.3.6 load\_pending\_transaction()

Load a transaction in the pending transaction (pdt) directory.

#### **Parameters**

timestamp	The timestamp of the transaction
-----------	----------------------------------

#### Returns

Transaction\*

Definition at line 127 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.4.3.7 load\_transaction()

Load a serialized Transaction\* structure.

#### **Parameters**

transaction	The returned Transaction*
fd	The serialized Transaction FD

Definition at line 117 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.4.3.8 send\_money()

```
int send_money (
```

```
size_t amount,
u_int64_t receiver_public_key )
```

Send 'amount' money to 'receiver\_public\_key'. This will broadcast a transaction to the network.

#### **Parameters**

amount	The amount to send
receiver_public_key	The receiver public key

#### Returns

returns 0 if the broadcast succeeds, -1 otherwise

#### 9.4.3.9 write\_transaction()

Serialize a Transaction\* structure.

#### **Parameters**

transaction	The Transaction* structure to serialize
fd	The output file FD

Definition at line 34 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.4.3.10 write\_transactiondata()

Serialize a TransactionData\* structure.

#### **Parameters**

transaction	The TransactionData* structure to serialize
fd	The output file FD

Definition at line 3 of file transaction.c.

Here is the caller graph for this function:

struct Wallet

# **Typedefs**

· typedef struct Wallet Wallet

#### **Functions**

```
• Wallet * get_my_wallet ()
```

Get my wallet object.

• int create account ()

Creates an account in local and broadcasts the creation to the network.

void add\_money\_to\_wallet (size\_t money)

Add money to my wallet.

void remove\_money\_from\_wallet (size\_t money)

Remove money from my wallet.

void add\_money\_to\_stake (size\_t money)

Add money to my stake.

• void remove\_money\_from\_stake (size\_t money)

Withdraw money from my stake.

# 9.5.1 Typedef Documentation

#### 9.5.1.1 Wallet

```
typedef struct Wallet Wallet
```

#### 9.5.2 Function Documentation

#### 9.5.2.1 add\_money\_to\_stake()

Add money to my stake.

#### **Parameters**

money	The amount of PEPITAS
-------	-----------------------

Definition at line 45 of file wallet.c.

Here is the call graph for this function:

#### 9.5.2.2 add\_money\_to\_wallet()

Add money to my wallet.

#### **Parameters**

money	The amount of PEPITAS
-------	-----------------------

Definition at line 26 of file wallet.c.

Here is the call graph for this function:

#### 9.5.2.3 create\_account()

```
int create_account ( )
```

Creates an account in local and broadcasts the creation to the network.

Returns

0 if the broadcast succeeds, otherwise 1

Definition at line 18 of file wallet.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.5.2.4 get\_my\_wallet()

```
Wallet* get_my_wallet ( )
```

Get my wallet object.

Returns

Wallet

Definition at line 6 of file wallet.c.

Include dependency graph for client.h: This graph shows which files directly or indirectly include this file:

## **Functions**

Node \* get\_my\_node (char who)

Get the my node object.

• int set\_neighbour (char who, char \*hostname, int family)

Sets a neighbour in the client.neightbours section.

• void remove neighbour (char who, int index)

Remove a neighbour in the client.neightbours section.

int number\_neighbours (char who)

Return the nb of neighbour in the client.neightbours section.

· void print\_neighbours (char who, char mask)

Print neighbours list.

void save\_neighbours (char who)

Save neighbours list in .neighbours/neighbours.

void load\_neighbours (char who)

Load neighbours list from .neighbours/neighbours.

• connection \* listen\_to (infos\_st \*infos, Neighbour neighbour, char \*connection\_type, connection \*connection)

Tries to connect to the peer-to-peer network via a node in the Node structure.

• int find\_empty\_connection (int max, connection \*connection)

Find if connection has any empty field.

• int is\_in\_neighbours (char who, char \*hostname)

Check if hostname is in client.neightbours

void \* client\_thread (void \*args)

Create a client thread.

## 9.7.1 Function Documentation

## 9.7.1.1 client\_thread()

Create a client thread.

**Parameters** 

args

Returns

void\*

Definition at line 268 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.7.1.2 find\_empty\_connection()

Find if connection has any empty field.

#### **Parameters**

max	The number of maximum connections
connection	The connection* buffer

int

Definition at line 258 of file client.c.

Here is the caller graph for this function:

# 9.7.1.3 get\_my\_node()

Get the my node object.

#### **Parameters**

who	Tells if it is the server or the client side
-----	--

#### Returns

Node\*

Definition at line 6 of file client.c.

Here is the caller graph for this function:

# 9.7.1.4 is\_in\_neighbours()

Check if hostname is in client.neightbours

## **Parameters**

who	Tells if it is the server or the client side
hostname	The IP adress to check

# Returns

int

Definition at line 149 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.7.1.5 listen\_to()

```
connection* listen_to (
    infos_st * infos,
    Neighbour neighbour,
    char * connection_type,
    connection * connection )
```

Tries to connect to the peer-to-peer network via a node in the Node structure.

#### **Parameters**

infos	Some shared information
neighbour	The neighbour to connect with
connection_type	The type of connection
connection	The connection* structure

#### Returns

socket FD or -1 if an error occurs

Definition at line 172 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.7.1.6 load\_neighbours()

Load neighbours list from .neighbours/neighbours.

#### **Parameters**

ſ		- U 16 U 1 U 1 U 1 U 1 U 1 U 1 U 1 U 1 U
l	who	Tells if it is the server or the client side

Definition at line 113 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.7.1.7 number\_neighbours()

Return the nb of neighbour in the client.neightbours section.

#### **Parameters**

who	Tells if it is the server or the client side
WHO	Tells II It is the server of the client side

Definition at line 160 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.7.1.8 print\_neighbours()

Print neighbours list.

## **Parameters**

who	Tells if it is the server or the client side
mask	

Definition at line 58 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.7.1.9 remove\_neighbour()

Remove a neighbour in the client.neightbours section.

#### **Parameters**

who	Tells if it is the server or the client side
index	The index of the neigbour to remove in client.neightbours

Definition at line 47 of file client.c.

Here is the call graph for this function:

## 9.7.1.10 save\_neighbours()

Save neighbours list in .neighbours/neighbours.

#### **Parameters**

who	Tells if it is the server or the client side

Definition at line 74 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.7.1.11 set\_neighbour()

Sets a neighbour in the client.neightbours section.

#### **Parameters**

who	Tells if it is the server or the client side
hostname	The neighbour IP adress
family	The type of IP adress

#### Returns

0 if sucess, -1 otherwise if full

Definition at line 19 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.8 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/headers/cryptosystem/hash.h File Reference

```
#include <stdlib.h>
#include "blockchain/block.h"
```

Include dependency graph for hash.h: This graph shows which files directly or indirectly include this file:

## **Functions**

```
    char * sha384_data (void *data, size_t len_data)
    Apply the SHA384 algorithm on a 'data' of size 'len_data'.
    char * hash_block_transactions (Block *block)
```

Apply the SHA384 to all block transactions.

## 9.8.1 Function Documentation

## 9.8.1.1 hash\_block\_transactions()

```
\begin{tabular}{ll} char* hash\_block\_transactions ( \\ & Block * block \end{tabular} ) \end{tabular}
```

Apply the SHA384 to all block transactions.

#### **Parameters**

block The block to deal with	
------------------------------	--

#### Returns

```
sha384[SHA384_DIGEST_LENGTH]
```

Definition at line 24 of file hash.c.

Here is the call graph for this function:

## 9.8.1.2 sha384\_data()

Apply the SHA384 algorithm on a 'data' of size 'len data'.

#### **Parameters**

data	The buffer to hash
len_data	The length of the buffer

#### Returns

char[97] (on heap)

Definition at line 6 of file hash.c.

```
    char * sign_message (char *data, size_t len_data, void *buffer)
    buffer <- encrypt(SHA284(msg,len_data),wallet_priv_key)</li>
```

• char \* sign\_message\_with\_key (char \*data, size\_t len\_data, RSA \*key, void \*buffer)

encrypt(SHA284(msg,len\_data),key) buffer <- encrypt(SHA284(msg,len\_data),key)</pre>

• int verify\_signature (void \*data, size\_t data\_len, char \*signature, RSA \*pub\_key)

Verifies if SHA384(data) == decrypt(signature,pub\_key)

int verify\_block\_signature (Block block)

Verifies if a block signature is valid.

• int verify\_transaction\_signature (Transaction \*transaction)

Verifies if a transaction signature is valid.

void get\_transaction\_data (Transaction \*trans, char \*\*buff, size\_t \*size)

Converts transactions to char \* buffer.

void write\_blockdata (BlockData blockdata, int fd)

Writes blockdata in a file.

void write\_block (Block block, int fd)

Writes a block in a file.

void sign\_block (Block \*block)

Signs a block with my private key.

void sign\_block\_with\_key (Block \*block, RSA \*key)

Signs a block.

• void sign\_transaction (Transaction \*transaction)

Signs a transaction with my private key.

• void sign\_transaction\_with\_key (Transaction \*transaction, RSA \*key)

Signs a transaction.

void sign\_block\_transactions (Block \*block)

Signs all transactions of a block with my private key.

## 9.10.1 Function Documentation

## 9.10.1.1 get\_transaction\_data()

Converts transactions to char \* buffer.

#### **Parameters**

transactions	The transaction array
buff	The buffer that receives the transactions
size	The number of transactions in the array

## Returns

The buffer allocated (Must be freed)

Converts transactions to char \* buffer.

#### **Parameters**

trans	The returned transaction
buff	The buffer with the serialized data
index	The buffer starting offset

Definition at line 40 of file transaction.c.

# 9.10.1.2 sign\_block()

```
void sign_block ( {\tt Block} \, * \, block \, )
```

Signs a block with my private key.

#### **Parameters**

block	The block to sign
-------	-------------------

Definition at line 108 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.10.1.3 sign\_block\_transactions()

Signs all transactions of a block with my private key.

#### **Parameters**

block The block to sign
-------------------------

Definition at line 138 of file signature.c.

Here is the call graph for this function:

# 9.10.1.4 sign\_block\_with\_key()

Signs a block.

#### **Parameters**

block	The block to sign
key	The key to use for the signature

Definition at line 115 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.10.1.5 sign\_message()

buffer <- encrypt(SHA284(msg,len\_data),wallet\_priv\_key)

If buffer == NULL, return a new allocated buffer

#### **Parameters**

data	The data to sign
len_data	The length of the data
buffer	The buffer to put signature into

#### Returns

char\*

Definition at line 10 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.10.1.6 sign\_message\_with\_key()

encrypt(SHA284(msg,len\_data),key) buffer <- encrypt(SHA284(msg,len\_data),key)

If buffer == NULL, return a new allocated buffer

#### **Parameters**

data	The data to sign
len_data	The length of the data
key	The key to use for the signature
buffer	The buffer to put signature into

### Returns

char\*

Definition at line 34 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.10.1.7 sign\_transaction()

Signs a transaction with my private key.

#### **Parameters**

transaction	The transaction to sign
-------------	-------------------------

Definition at line 122 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.10.1.8 sign\_transaction\_with\_key()

Signs a transaction.

#### **Parameters**

transaction	The transaction to sign
key	The key to use for the signature

Definition at line 130 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.10.1.9 verify\_block\_signature()

Verifies if a block signature is valid.

#### **Parameters**

block	The block to verify
-------	---------------------

## Returns

1 if valid, 0 otherwise

Definition at line 83 of file signature.c.

Here is the call graph for this function:

# 9.10.1.10 verify\_signature()

```
int verify_signature ( void * data,
```

```
size_t data_len,
char * signature,
RSA * pub_key )
```

Verifies if SHA384(data) == decrypt(signature,pub\_key)

#### **Parameters**

data	The buffer to verify	
data_len	The length of the buffer	
signature	The signature to compare with SHA384(data, len_data)	
pub_key	The RSA public key used for the decryption	

#### Returns

int

Definition at line 57 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.10.1.11 verify\_transaction\_signature()

Verifies if a transaction signature is valid.

### **Parameters**

transaction	The transaction to verify

#### Returns

1 if valid, 0 otherwise

Definition at line 95 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.10.1.12 write\_block()

Writes a block in a file.

#### **Parameters**

block The block to write	
fd	the file descriptor of the file in which the block is written

Definition at line 228 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.10.1.13 write\_blockdata()

Writes blockdata in a file.

#### **Parameters**

blockdata	The blockdata to write
fd	The file descriptor of the file in which the blockdata is written

Definition at line 196 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.13.1.1 MAX

Definition at line 10 of file math.h.

# 9.13.1.2 MIN

Definition at line 9 of file math.h.

# 9.14 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/headers/misc/safe.h File Reference

```
#include <stdio.h>
#include <stdlib.h>
#include <err.h>
#include <unistd.h>
#include <string.h>
#include <errno.h>
#include <sys/types.h>
#include <sys/socket.h>
```

Include dependency graph for safe.h: This graph shows which files directly or indirectly include this file:

## **Functions**

int safe\_write (int fd, const void \*buf, ssize\_t count)

Writes safely to a file descriptor.

int safe\_send (int fd, const void \*buf, ssize\_t count)

Send safely to a file descriptor.

ssize\_t safe\_read (int fd, const void \*\*buf, size\_t \*bufsize)

Reads safely in a file descriptor until '\r\n\r\n'.

• ssize t safe fread (void \*buffer, const size t size, const size t n, FILE \*file)

Calls 'fread' but safely !

## 9.14.1 Function Documentation

# 9.14.1.1 safe\_fread()

Calls 'fread' but safely!

#### **Parameters**

buffer	The buffer to write on
size	The size of 1 read element
n	The number of elements to read
file	The IO FILE

## Returns

ssize\_t, -1 if error or the number of read items

Definition at line 58 of file safe.c.

Here is the caller graph for this function:

# 9.14.1.2 safe\_read()

```
ssize_t safe_read (
            int fd,
            const void ** buf,
            size_t * bufsize )
```

Reads safely in a file descriptor until '\r\n\r\n'.

## **Parameters**

fd	The file descriptor	
buf	The buffer which contains the message	

# Returns

The number of byte the file 'fd', if -1 error

Definition at line 31 of file safe.c.

Here is the caller graph for this function:

# 9.14.1.3 safe\_send()

```
int safe_send (
            int fd,
            const void * buf,
            ssize_t count )
```

Send safely to a file descriptor.

# **Parameters**

fd	The file descriptor
buf	The buffer to write
COUNT	The number of byte to write in fd

Generated by Doxygen

#### Returns

Error code

Definition at line 17 of file safe.c.

Here is the caller graph for this function:

## 9.14.1.4 safe\_write()

```
int safe_write (
    int fd,
    const void * buf,
    ssize_t count )
```

Writes safely to a file descriptor.

#### **Parameters**

fd	The file descriptor
buf	The buffer to write
count	The number of byte to write in fd

### Returns

Error code

Definition at line 3 of file safe.c.

Here is the caller graph for this function:

# 9.15 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/headers/network/get\_data.h File Reference

```
#include <string.h>

#include "network/client.h"
#include "network/server.h"
#include "network/send_data.h"
#include "validation/validation_engine.h"
#include "ui/ui.h"
```

Include dependency graph for get\_data.h: This graph shows which files directly or indirectly include this file:

## **Functions**

• size\_t read\_header (int sockfd, infos\_st \*infos)

Waits a header in 'sockfd', reads it and processes it.

Fetches the client list from a socket fd.

• int read\_get\_blocks (int fd, infos\_st \*infos)

Read blocks from a sock fd.

• size\_t read\_actual\_height (int fd)

Get the actual height of a node via its sock fd.

int read\_send\_block (int fd)

Read a socket sended block.

int read\_vote (int fd, infos\_st \*infos)

Read a socket sended vote.

int read\_epoch\_block (int fd)

Read a socket sended epoch block.

• int read\_get\_pending\_transaction (int fd)

Get a socket sended pending transaction.

• int read\_send\_pending\_transaction (int fd, infos\_st \*infos)

Read a socket sended pending transaction.

• int read\_send\_pending\_transaction\_list (int fd, infos\_st \*infos)

Read a socket sended pending transaction list.

• int epoch\_validation\_process (int blockfile, size\_t height, int id)

Epoch validation protocol.

#### 9.15.1 Function Documentation

### 9.15.1.1 epoch\_validation\_process()

Epoch validation protocol.

# Parameters

blockfile	The epoch FD
height	The epoch height
id	The epoch ID

Returns

int

Definition at line 482 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.15.1.2 fetch\_client\_list()

Fetches the client list from a socket fd.

#### **Parameters**

who	Tells if it is the server or the client side
fd	The socket fd

## Returns

0 if sucess, -1 otherwise

Definition at line 107 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.15.1.3 read\_actual\_height()

Get the actual height of a node via its sock fd.

#### **Parameters**

```
fd The sock fd
```

# Returns

size\_t

Definition at line 186 of file get\_data.c.

Here is the caller graph for this function:

# 9.15.1.4 read\_epoch\_block()

Read a socket sended epoch block.

#### **Parameters**

fd	The socket fd
----	---------------

Returns

int

Definition at line 420 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.15.1.5 read\_get\_blocks()

Read blocks from a sock fd.

#### **Parameters**

fd	The sock fd
infos	Shared information

Returns

int

Definition at line 155 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.15.1.6 read\_get\_pending\_transaction()

```
int read_get_pending_transaction ( \label{eq:condition} \text{int } fd \ )
```

Get a socket sended pending transaction.

#### **Parameters**

fd The socket fd

Returns

int

Definition at line 629 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.15.1.7 read\_header()

Waits a header in 'sockfd', reads it and processes it.

### **Parameters**

sockfd	The sock FD
infos	Shared information

#### Returns

0 if sucess, -1 otherwise

Definition at line 136 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.15.1.8 read\_send\_block()

Read a socket sended block.

#### **Parameters**

```
fd The socket fd
```

# Returns

int

Definition at line 193 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.15.1.9 read\_send\_pending\_transaction()

Read a socket sended pending transaction.

#### **Parameters**

fd	The socket fd
infos	Shared information

#### Returns

int

Definition at line 571 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.15.1.10 read\_send\_pending\_transaction\_list()

Read a socket sended pending transaction list.

#### **Parameters**

fd	The socket fd
infos	Shared information

#### Returns

int

Definition at line 549 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.15.1.11 read\_vote()

Read a socket sended vote.

## **Parameters**

fd	The socket fd
infos	Shared information

Returns

int

Definition at line 279 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### **Data Structures**

· struct blockinfo

#### **Functions**

- void \* setup (void \*args)
  - Setups the gtk widgets for the GUI.
- gboolean on\_main\_window\_delete (GtkWidget \*widget, \_\_attribute\_\_((unused)) gpointer data)
   Destroys the window when it is closed.
- void on\_main\_window\_destroy (\_\_attribute((unused)) GtkWidget \*widget, \_\_attribute\_\_((unused)) gpointer data)

Quits GTK when the program ends.

- gboolean on\_transaction\_button\_press (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)

  Will be used when the transaction function is ready.
- gboolean on\_invest\_button1\_press (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)

  Opens the invest window.
- gboolean on\_invest\_button2\_press (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)

  Resets the entry in the invest window and closes it, will later be used for the invest function.
- gboolean on\_recover\_button1\_press (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)

  Opens the recover window.
- gboolean on\_recover\_button2\_press (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)

  Resets the entry in the recover window and closes it, will later be used for the recover function.
- gboolean on\_add\_contact\_button1\_press (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)

  Opens the contact window.
- gboolean add\_contact (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)

Adds a contact to the treeview if the entrys weren't empty, and closes the contact window.

- void change\_label\_text (GtkLabel \*label, char \*text)
- gboolean on create key but1 press (GtkWidget \*widget, GdkEventKey \*event, gpointer user data)
- gboolean on\_create\_key\_but2\_press (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)
- gboolean on\_connect\_but\_press (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)
- void add contacts from file (char \*name, char \*public key)
- void load\_contacts\_from\_file ()
- void add\_contact\_to\_combobox (char \*name)
- void update\_labels ()

- void add transaction from file (double amount, char \*public key, char \*date)
- void load\_transaction\_from\_file ()
- char \* get\_public\_key\_from\_contacts (const char \*name)
- void add new blockinfo (size t height, size t transaction)
- void update\_sync (size\_t actual, size\_t final)
- gboolean set block viewer plus (GtkWidget \*widget, GdkEventKey \*event, gpointer user data)
- gboolean set\_block\_viewer\_minus (GtkWidget \*widget, GdkEventKey \*event, gpointer user\_data)
- void set\_block\_viewer (int height)

#### **Variables**

```
GtkLabel * balance_1
GtkLabel * balance_2
GtkLabel * stake_label1
GtkLabel * stake_label2
GtkLabel * stake_label3
GtkLabel * synchro_label
GtkLabel * block_amount_label
GtkLabel * connections_label
GtkLabel * mempool_label
struct blockinfo blocksinfo [3]
```

#### 9.20.1 Function Documentation

## 9.20.1.1 add\_contact()

Adds a contact to the treeview if the entrys weren't empty, and closes the contact window.

#### **Parameters**

widget	unused
event	unused
user data	unused

#### Returns

gboolean Error code

## 9.20.1.2 add\_contact\_to\_combobox()

Definition at line 624 of file ui.c.

Here is the caller graph for this function:

## 9.20.1.3 add\_contacts\_from\_file()

Definition at line 632 of file ui.c.

Here is the caller graph for this function:

#### 9.20.1.4 add\_new\_blockinfo()

Definition at line 322 of file ui.c.

## 9.20.1.5 add\_transaction\_from\_file()

Definition at line 480 of file ui.c.

Here is the caller graph for this function:

#### 9.20.1.6 add\_transaction\_with\_contact()

Definition at line 460 of file ui.c.

Here is the caller graph for this function:

## 9.20.1.7 add\_transaction\_with\_pkey()

Definition at line 440 of file ui.c.

Here is the caller graph for this function:

## 9.20.1.8 change\_label\_text()

Definition at line 233 of file ui.c.

Here is the caller graph for this function:

## 9.20.1.9 get\_public\_key\_from\_contacts()

Definition at line 667 of file ui.c.

Here is the caller graph for this function:

#### 9.20.1.10 load\_contacts\_from\_file()

```
void load_contacts_from_file ( )
```

Definition at line 641 of file ui.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.20.1.11 load\_transaction\_from\_file()

```
void load_transaction_from_file ( )
```

#### 9.20.1.12 on add contact button1 press()

Opens the contact window.

## **Parameters**

widget	unused
event	unused
user_data	unused

#### Returns

gboolean Error code

## 9.20.1.13 on\_connect\_but\_press()

## 9.20.1.14 on\_create\_key\_but1\_press()

#### 9.20.1.15 on\_create\_key\_but2\_press()

#### 9.20.1.16 on invest button1\_press()

## Opens the invest window.

#### **Parameters**

widget	unused
event	unused
user_data	unused

#### Returns

gboolean

## 9.20.1.17 on\_invest\_button2\_press()

Resets the entry in the invest window and closes it, will later be used for the invest function.

#### **Parameters**

widget	unused
event	unused
user_data	unused

#### Returns

gboolean Error Code

## 9.20.1.18 on\_main\_window\_delete()

Destroys the window when it is closed.

### **Parameters**

widget	The main window of the GUI
--------	----------------------------

#### Returns

gboolean Error code

Definition at line 358 of file ui.c.

## 9.20.1.19 on\_main\_window\_destroy()

```
void on_main_window_destroy (
    __attribute((unused)) GtkWidget * widget,
    __attribute__((unused)) gpointer data)
```

Quits GTK when the program ends.

## 9.20.1.20 on\_recover\_button1\_press()

Opens the recover window.

#### **Parameters**

widget	unused
event	unused
user_data	unused

## Returns

gboolean Error code

## 9.20.1.21 on\_recover\_button2\_press()

Resets the entry in the recover window and closes it, will later be used for the recover function.

### **Parameters**

widget	unused
event	unused
user_data	unused

#### Returns

gboolean Error code

## 9.20.1.22 on\_transaction\_button\_press()

Will be used when the transaction function is ready.

#### **Parameters**

widget	unused
event	unused
user_data	unused

#### Returns

gboolean Error code

## 9.20.1.23 set\_block\_viewer()

Definition at line 270 of file ui.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.20.1.24 set\_block\_viewer\_minus()

## 9.20.1.25 set\_block\_viewer\_plus()

## 9.20.1.26 setup()

```
void* setup (
     void * args )
```

Setups the gtk widgets for the GUI.

Returns

int Returns 1 if there is an error, 0 otherwise

Definition at line 80 of file ui.c.

Here is the caller graph for this function:

#### 9.20.1.27 update\_labels()

```
void update_labels ( )
```

Definition at line 796 of file ui.c.

Here is the call graph for this function:

## 9.20.1.28 update\_sync()

Definition at line 339 of file ui.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.20.2 Variable Documentation

#### 9.20.2.1 balance\_1

```
GtkLabel* balance_1
```

Definition at line 24 of file ui.c.

## 9.20.2.2 balance\_2 GtkLabel\* balance\_2 Definition at line 25 of file ui.c. 9.20.2.3 block\_amount\_label GtkLabel\* block\_amount\_label Definition at line 30 of file ui.c. 9.20.2.4 blocksinfo struct blockinfo blocksinfo[3] Definition at line 32 of file ui.h. 9.20.2.5 connections\_label GtkLabel\* connections\_label Definition at line 31 of file ui.c. 9.20.2.6 mempool\_label GtkLabel\* mempool\_label Definition at line 32 of file ui.c. 9.20.2.7 stake\_label1

GtkLabel\* stake\_label1

Definition at line 26 of file ui.c.

#### 9.20.2.8 stake\_label2

```
GtkLabel* stake_label2
```

Definition at line 27 of file ui.c.

#### 9.20.2.9 stake label3

```
GtkLabel* stake_label3
```

Definition at line 28 of file ui.c.

#### 9.20.2.10 synchro\_label

```
GtkLabel* synchro_label
```

Definition at line 29 of file ui.c.

## 9.21 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/headers/validation/epoch\_man.h File Reference

```
#include "blockchain/transaction.h"
#include "blockchain/block.h"
#include "cryptosystem/signature.h"
#include "validation_engine.h"
#include "misc/bits.h"
#include "validators.h"
#include <openssl/rsa.h>
#include <dirent.h>
```

Include dependency graph for epoch\_man.h: This graph shows which files directly or indirectly include this file:

## **Functions**

- char \* create\_vote\_data (Block \*block, char vote, int validator\_index, size\_t \*data\_length)
- Block \* create\_epoch\_block ()

Create a block object with the previous block hash & votes.

RSA \* get\_epoch\_man\_pkey (BlockData \*block\_data)

Give the pkey of the creator of a block.

• void give\_punishments\_and\_rewards (Block \*prev\_block, Block \*current\_block)

Add punishmnent and reward transactions to validators of the 'prev\_block' into 'current\_block'.

#### 9.21.1 Function Documentation

## 9.21.1.1 create\_epoch\_block()

```
Block* create_epoch_block ( )
```

Create a block object with the previous block hash & votes.

See also

The function create a block based on the local last block

Returns

Block\*

Definition at line 141 of file epoch\_man.c.

Here is the call graph for this function: Here is the caller graph for this function:

### 9.21.1.2 create\_vote\_data()

Definition at line 10 of file epoch\_man.c.

#### 9.21.1.3 get\_epoch\_man\_pkey()

```
RSA* get_epoch_man_pkey (

BlockData * block_data )
```

Give the pkey of the creator of a block.

#### **Parameters**

- 1			
	block	data	The created block data
	DIOUN	uaia	I THE CICALCA DIOCK GALA

Returns

RSA\*, NULL if the data is corrupted

Definition at line 3 of file epoch\_man.c.

Here is the caller graph for this function:

#### 9.21.1.4 give\_punishments\_and\_rewards()

Add punishmnent and reward transactions to validators of the 'prev\_block' into 'current\_block'.

#### See also

Number of added transactions = number of validators in 'prev\_block'

#### **Parameters**

prev_block	The last validated block
current_block	The current block (in creation)

Definition at line 31 of file epoch man.c.

Here is the caller graph for this function:

```
#include "blockchain/block.h"
#include "validation/validation_engine.h"
```

Include dependency graph for plebe.h: This graph shows which files directly or indirectly include this file:

## **Functions**

```
    int plebe_adhere_block (Block *block)
    Adhere a block, write it locally.
```

#### 9.22.1 Function Documentation

#### 9.22.1.1 plebe\_adhere\_block()

```
int plebe_adhere_block ( {\tt Block} \ * \ block \ )
```

Adhere a block, write it locally.

#### **Parameters**

block	The block to adhere
-------	---------------------

#### Returns

0 if success, 2 if need to sync error, 1 if data corrupted error

Definition at line 7 of file plebe.c.

Here is the call graph for this function:

## 9.23 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/headers/validation/validation\_engine.h File Reference

#### **Macros**

- #define VERIDCT NO 0
- #define VERIDCT YES 1

## **Functions**

int send\_verdict (Block \*block, char verdict)

Broadcast a verdict about a block validity to the network.

• Transaction \*\* validate\_transactions (Transaction \*\*transaction\_to\_validate, size\_t nb\_transactions, size\_t \*nb\_returned\_transactions)

Validate some transactions.

int comital\_validate\_block (Block \*block)

For the comital, check block validity.

• char plebe\_verify\_block (Block \*block)

For the plèbe, check block validity.

## **Variables**

• connection \* client\_connections

### 9.23.1 Macro Definition Documentation

## 9.23.1.1 VERIDCT\_NO

```
#define VERIDCT_NO 0
```

Definition at line 19 of file validation\_engine.h.

## 9.23.1.2 VERIDCT\_YES

```
#define VERIDCT_YES 1
```

Definition at line 20 of file validation\_engine.h.

#### 9.23.2 Function Documentation

#### 9.23.2.1 comital\_validate\_block()

For the comital, check block validity.

#### **Parameters**

block The block to check

Returns

int

Definition at line 242 of file validation\_engine.c.

Here is the call graph for this function: Here is the caller graph for this function:

### 9.23.2.2 plebe\_verify\_block()

For the plèbe, check block validity.

#### **Parameters**

block The block to c
----------------------

#### Returns

int

Definition at line 199 of file validation\_engine.c.

Here is the caller graph for this function:

#### 9.23.2.3 send\_verdict()

Broadcast a verdict about a block validity to the network.

### **Parameters**

block	The block awaiting validation	
verdict	The verdict : 0 -> "SHAME! The block is not valid at all", 1 -> "The block is valid for me"	

#### Returns

0 if the broadcast suceed, -1 if not

Definition at line 305 of file validation\_engine.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.23.2.4 validate\_transactions()

Validate some transactions.

#### See also

The verification must take into account:

- Sender != receiver
- · If the sender signature is correct
- · If the sender exists in the blockchain and has enough money
- If the receiver exists
- If sender and receiver remaining money fields are correct

#### **Parameters**

transaction_to_validate	The transactions to validate
nb_transactions	The number of transactions to validate
nb_returned_transactions	The number of returned (valid) transactions

#### Returns

Transaction\*\*, the valid transactions

Definition at line 3 of file validation engine.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.23.3 Variable Documentation

## 9.23.3.1 client\_connections

```
connection* client_connections
```

Definition at line 4 of file client.c.

#include "misc/math.h"
```

Include dependency graph for validators.h: This graph shows which files directly or indirectly include this file:

#### **Data Structures**

- · struct validators state header
- struct validators\_state\_item

#### **Macros**

#define MAX\_VALIDATORS\_PER\_BLOCK 512

#### **Functions**

· void init validators state ()

*Init the* validators.state file if it doesn't exists.

RSA \*\* get\_comittee (size\_t block\_height, int \*nb\_validators)

Get the a comittee RSA public keys on a specific epoch.

RSA \*\* get\_next\_comittee (int \*nb\_validators)

Get the a comittee RSA public keys on a specific epoch.

ssize\_t get\_validators\_states\_total\_stake ()

Get the total stake of the network (parse 'validators.state')

ssize\_t get\_validators\_states\_nb\_validators ()

Get the number of validators of the network (parse 'validators.state')

ssize\_t get\_validators\_states\_block\_height\_validity ()

Get the validators states block height validity (parse 'validators.state')

• ssize\_t get\_validator\_stake (size\_t validator\_id)

Get a validator total stake (parse 'validators.state')

ssize\_t get\_validator\_power (size\_t validator\_id)

Get a validator power (parse 'validators.state')

RSA \* get\_validator\_pkey (size\_t validator\_id)

Get the validator pkey as RSA\* (parse 'validators.state')

ssize\_t get\_validator\_id (RSA \*pkey)

Get the validator id in 'validators.state'.

• int i am commitee member ()

Check if the current user is a member of the next comitee.

char update\_validators\_state (Block \*block)

Given a block, update the 'validators.state' with the transactions.

### 9.24.1 Macro Definition Documentation

#### 9.24.1.1 MAX\_VALIDATORS\_PER\_BLOCK

#define MAX\_VALIDATORS\_PER\_BLOCK 512

Definition at line 28 of file validators.h.

## 9.24.2 Function Documentation

## 9.24.2.1 get\_comittee()

Get the a comittee RSA public keys on a specific epoch.

#### **Parameters**

block_height	The height of the block you want a comitte from
nb_validators	return value, the number of selected validators

#### See also

The 'next block' is referring to block after the last block available OFFLINE

#### Returns

[\*RSA]

Definition at line 46 of file validators.c.

#### 9.24.2.2 get\_next\_comittee()

Get the a comittee RSA public keys on a specific epoch.

## **Parameters**

nb_validators return value, the number of selected validators
---

### See also

The 'next block' is referring to block after the last block available OFFLINE

#### Returns

[\*RSA]

Definition at line 135 of file validators.c.

Here is the caller graph for this function:

#### 9.24.2.3 get\_validator\_id()

```
ssize_t get_validator_id ( {\tt RSA} \ * \ pkey \ )
```

Get the validator id in 'validators.state'.

#### **Parameters**

```
pkey The RSA public key
```

#### Returns

ssize\_t, the validator index

Definition at line 247 of file validators.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.24.2.4 get\_validator\_pkey()

Get the validator pkey as RSA\* (parse 'validators.state')

#### **Parameters**

validator⊷	The id of the validator in 'validators.state'
_id	

#### Returns

RSA\*

Definition at line 216 of file validators.c.

Here is the call graph for this function:

#### 9.24.2.5 get\_validator\_power()

Get a validator power (parse 'validators.state')

## **Parameters**

validator⊷	The id of the validator in 'validators.state'
id	

#### Returns

```
ssize_t
```

Definition at line 199 of file validators.c.

Here is the call graph for this function:

## 9.24.2.6 get\_validator\_stake()

Get a validator total stake (parse 'validators.state')

#### **Parameters**

validator⊷	The id of the validator in 'validators.state'
_id	

#### Returns

ssize\_t

Definition at line 182 of file validators.c.

Here is the call graph for this function:

### 9.24.2.7 get\_validators\_states\_block\_height\_validity()

```
ssize_t get_validators_states_block_height_validity ( )
```

Get the validators states block height validity (parse 'validators.state')

## Returns

ssize t

Definition at line 168 of file validators.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.24.2.8 get\_validators\_states\_nb\_validators()

```
ssize_t get_validators_states_nb_validators ( )
```

Get the number of validators of the network (parse 'validators.state')

#### Returns

ssize t

Definition at line 154 of file validators.c.

Here is the call graph for this function:

#### 9.24.2.9 get\_validators\_states\_total\_stake()

```
ssize_t get_validators_states_total_stake ( )
```

Get the total stake of the network (parse 'validators.state')

Returns

ssize\_t

Definition at line 140 of file validators.c.

Here is the call graph for this function:

#### 9.24.2.10 i\_am\_commitee\_member()

```
int i_am_commitee_member ( )
```

Check if the current user is a member of the next comitee.

Returns

The id in the comittee, -1 if you are not member of the comittee

Definition at line 281 of file validators.c.

Here is the caller graph for this function:

#### 9.24.2.11 init\_validators\_state()

```
void init_validators_state ( )
```

Init the validators.state file if it doesn't exists.

Definition at line 33 of file validators.c.

Here is the caller graph for this function:

#### 9.24.2.12 update\_validators\_state()

Given a block, update the 'validators.state' with the transactions.

#### **Parameters**

block

#### Returns

0, -1 if the given block height is not 'validators.state' height + 1

Definition at line 333 of file validators.c.

```

## **Functions**

Node \* get\_my\_node (char who)

Get the my node object.

• int set\_neighbour (char who, char \*hostname, int family)

Sets a neighbour in the client.neightbours section.

• void remove\_neighbour (char who, int index)

Remove a neighbour in the client.neightbours section.

· void print\_neighbours (char who, char mask)

Print neighbours list.

void save\_neighbours (char who)

Save neighbours list in .neighbours/neighbours.

void load\_neighbours (char who)

Load neighbours list from .neighbours/neighbours.

• int is in neighbours (char who, char \*hostname)

Check if hostname is in client.neightbours

• int number\_neighbours (char who)

Return the nb of neighbour in the client.neightbours section.

 connection \* listen\_to (infos\_st \*infos, Neighbour neighbour, char \*connection\_type, connection \*connection)

Tries to connect to the peer-to-peer network via a node in the Node structure.

• int find\_empty\_connection (int max, connection \*connections)

Find if connection has any empty field.

void \* client\_thread (void \*args)

Create a client thread.

#### **Variables**

• connection \* client\_connections = NULL

### 9.28.1 Function Documentation

#### 9.28.1.1 client\_thread()

Create a client thread.

**Parameters** 

args

Returns

void\*

Definition at line 268 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.28.1.2 find\_empty\_connection()

Find if connection has any empty field.

#### **Parameters**

max	The number of maximum connections
connection	The connection* buffer

#### Returns

int

Definition at line 258 of file client.c.

Here is the caller graph for this function:

## 9.28.1.3 get\_my\_node()

Get the my node object.

#### **Parameters**

who	Tells if it is the server or the client side
-----	--

## Returns

Node\*

Definition at line 6 of file client.c.

Here is the caller graph for this function:

## 9.28.1.4 is\_in\_neighbours()

Check if hostname is in client.neightbours

#### **Parameters**

who	Tells if it is the server or the client side
hostname	The IP adress to check

#### Returns

int

Definition at line 149 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.28.1.5 listen\_to()

```
connection* listen_to (
    infos_st * infos,
    Neighbour neighbour,
    char * connection_type,
    connection * connection )
```

Tries to connect to the peer-to-peer network via a node in the Node structure.

#### **Parameters**

infos	Some shared information
neighbour	The neighbour to connect with
connection_type	The type of connection
connection	The connection* structure

#### Returns

socket FD or -1 if an error occurs

Definition at line 172 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.28.1.6 load\_neighbours()

Load neighbours list from .neighbours/neighbours.

#### **Parameters**

Definition at line 113 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.28.1.7 number\_neighbours()

Return the nb of neighbour in the client.neightbours section.

#### **Parameters**

who	Tells if it is the server or the client side
*****	

Definition at line 160 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.28.1.8 print\_neighbours()

Print neighbours list.

## Parameters

who	Tells if it is the server or the client side
mask	

Definition at line 58 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.28.1.9 remove\_neighbour()

Remove a neighbour in the client.neightbours section.

#### **Parameters**

who	Tells if it is the server or the client side
index	The index of the neigbour to remove in client.neightbours

Definition at line 47 of file client.c.

Here is the call graph for this function:

#### 9.28.1.10 save\_neighbours()

```
void save_neighbours ( {\tt char} \ {\it who} \ )
```

Save neighbours list in .neighbours/neighbours.

#### **Parameters**

Definition at line 74 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.28.1.11 set\_neighbour()

Sets a neighbour in the client.neightbours section.

#### **Parameters**

who	Tells if it is the server or the client side
hostname	The neighbour IP adress
family	The type of IP adress

### Returns

0 if sucess, -1 otherwise if full

Definition at line 19 of file client.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.28.2 Variable Documentation

#### 9.28.2.1 client\_connections

```
connection* client_connections = NULL
```

Definition at line 4 of file client.c.

## 9.29 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/atrier.c File Reference

```
#include "blockchain/block.h"
#include "client.h"
#include "network/client.h"

#### 9.29.1.6 move\_file()

Definition at line 27 of file atrier.c.

Here is the call graph for this function:

## 9.29.1.7 new\_transaction()

Definition at line 148 of file atrier.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.29.1.8 update\_blockchain()

Definition at line 285 of file atrier.c.

# 9.29.1.9 update\_blockchain\_height()

Definition at line 249 of file atrier.c.

Here is the call graph for this function:

## 9.29.1.10 update\_pdt()

```
void update_pdt (
          int number )
```

Definition at line 20 of file atrier.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.29.1.11 update\_pending\_transactions\_list()

```
void update_pending_transactions_list ( )
```

Definition at line 354 of file atrier.c.

Here is the call graph for this function:

# 9.29.1.12 Validate()

void Validate ( )

Definition at line 62 of file atrier.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.29.2 Variable Documentation

# 9.29.2.1 ac\_infos

infos\_st\* ac\_infos

Definition at line 14 of file atrier.c.

# 9.29.2.2 client\_connections

connection\* client\_connections

Definition at line 4 of file client.c.

# 9.30 /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-← Cryptocurrency/src/core/blockchain/block.c File Reference

#include "blockchain/block.h"
Include dependency graph for block.c:

# **Functions**

ChunkBlockchain \* load\_blockchain (size\_t nb\_chunk)

Loads a blockchain object with a padding of 'nb\_chunk'.

ChunkBlockchain \* load\_last\_blockchain ()

Load the last local blockchain chunk.

void write\_block\_file (Block block)

Writes a block struct in a file.

- void convert\_data\_to\_blockdata (BlockData \*blockdata, int fd)
- void convert\_data\_to\_block (Block \*block, int fd)

Convert serialized data to Block\*.

Block \* get\_block (size\_t block\_height)

Get a block object.

void free\_block (Block \*block)

Free a block structure.

Block \* get\_next\_block (Block \*block)

For a block of height h, returns the block of height h+1

Block \* get\_prev\_block (Block \*block)

For a block of height h, return the block of height h-1

char \* get\_blockdata\_data (Block \*block, size\_t \*size)

Get the blockdata data object.

void write\_blockdata (BlockData blockdata, int fd)

Writes blockdata in a file.

void write\_block (Block block, int fd)

Writes a block in a file.

void update\_wallet\_with\_block (Block block)

Update the Wallet\* structure with the transactions in a block.

• void delete\_epochs (size\_t height)

Delete specific epoches (draft blocks)

• Block \* get\_epoch (int id, size\_t height)

Get the epoch object.

void clear\_block (Block \*block)

Free block data, without deleting it structure.

# 9.30.1 Function Documentation

# 9.30.1.1 clear\_block()

Free block data, without deleting it structure.

block The block to free
-------------------------

Definition at line 337 of file block.c.

Here is the caller graph for this function:

## 9.30.1.2 convert\_data\_to\_block()

Convert serialized data to Block\*.

### **Parameters**

block	The return Block*
fd	The file descriptor where data are serialized

Definition at line 103 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.3 convert\_data\_to\_blockdata()

Definition at line 70 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.4 delete\_epochs()

Delete specific epoches (draft blocks)

# **Deprecated**

## **Parameters**

height The height of the epochs
---------------------------------

Definition at line 301 of file block.c.

Here is the caller graph for this function:

# 9.30.1.5 free\_block()

Free a block structure.

## **Parameters**

block The block to free	
-------------------------	--

Definition at line 133 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.6 get\_block()

Get a block object.

## **Parameters**

block_height	The height of the block
--------------	-------------------------

# Returns

Block\*

Definition at line 111 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.7 get\_blockdata\_data()

Get the blockdata data object.

block	The block
size	The size of the block

## Returns

char\*

Definition at line 159 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.8 get\_epoch()

Get the epoch object.

### **Parameters**

id	The ID of the epoch
height	The height of the epoch

## Returns

Block\*

Definition at line 316 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.9 get\_next\_block()

For a block of height h, returns the block of height h+1

# **Parameters**

block	The base block

## Returns

The next Block\*

Definition at line 139 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.30.1.10 get\_prev\_block()

For a block of height h, return the block of height  $h\!-\!1$ 

## **Parameters**

### Returns

The previous Block\*

Definition at line 149 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.11 load\_blockchain()

Loads a blockchain object with a padding of 'nb\_chunk'.

### **Parameters**

nb_chunk	The chunk nb, if 0: return the current blockchain object without modification
----------	---

# Returns

ChunkBlockchain\*, NULL if the ChunkBlockchain is empty after switching

Definition at line 3 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.12 load\_last\_blockchain()

```
ChunkBlockchain* load_last_blockchain ( )
```

Load the last local blockchain chunk.

## **Parameters**

nb\_chunk

## Returns

ChunkBlockchain\*, NULL if the ChunkBlockchain is empty after switching

Definition at line 47 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.13 update\_wallet\_with\_block()

Update the Wallet\* structure with the transactions in a block.

### **Parameters**

block	The block to fetch update from
-------	--------------------------------

Definition at line 236 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.14 write\_block()

Writes a block in a file.

# **Parameters**

block	The block to write
fd	the file descriptor of the file in which the block is written

Definition at line 228 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.30.1.15 write\_block\_file()

Writes a block struct in a file.

block	The block to write	
-------	--------------------	--

Definition at line 52 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.30.1.16 write\_blockdata()

Writes blockdata in a file.

#### **Parameters**

blockdata	The blockdata to write
fd	The file descriptor of the file in which the blockdata is written

Definition at line 196 of file block.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.31 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/blockchain/blockchain\_header.c File Reference

```
#include "blockchain/blockchain_header.h"
Include dependency graph for blockchain_header.c:
```

## **Functions**

- void write\_block\_header (FILE \*fd, Block \*block, size\_t height)
- void gen\_blockchain\_header (infos\_st \*infos)

Generate block shared information.

• size\_t get\_receiver\_remaining\_money (infos\_st \*infos, RSA \*receiver\_public\_key)

Get the receiver remaining money.

# 9.31.1 Function Documentation

# 9.31.1.1 gen\_blockchain\_header()

Generate block shared information.

# **Deprecated**

### **Parameters**

infos	The information
-------	-----------------

Definition at line 9 of file blockchain\_header.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.31.1.2 get\_receiver\_remaining\_money()

Get the receiver remaining money.

### **Parameters**

infos	Threads shared information
receiver_public_key	The RSA public key of the receiver

### Returns

size\_t

Definition at line 40 of file blockchain\_header.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.31.1.3 write\_block\_header()

```
void write_block_header (
     FILE * fd,
     Block * block,
     size_t height )
```

Definition at line 3 of file blockchain\_header.c.

Here is the caller graph for this function:

# 9.32 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/blockchain/transaction.c File Reference

```
#include "blockchain/transaction.h"
Include dependency graph for transaction.c:
```

## **Functions**

void write\_transactiondata (TransactionData \*transaction, int fd)

Serialize a TransactionData\* structure.

void write\_transaction (Transaction \*transaction, int fd)

Serialize a Transaction\* structure.

void get\_transaction\_data (Transaction \*trans, char \*\*buff, size\_t \*index)

Get the transaction data object.

• void convert\_data\_to\_transactiondata (TransactionData \*transactiondata, int fd)

Convert serialized TransactionData\* to TransactionData\*.

void load transaction (Transaction \*transaction, int fd)

Load a serialized Transaction\* structure.

Transaction \* load\_pending\_transaction (time\_t timestamp)

Load a transaction in the pending transaction (pdt) directory.

void add pending transaction (Transaction \*transaction)

Add a transaction to the pending transaction (pdt) directory.

• Transaction create\_new\_transaction (infos\_st \*infos, char type, RSA \*receiver\_public\_key, size\_t amount, char cause[512], char asset[512])

Create a new transaction.

void flush\_pending\_transactions (Transaction \*\*transactions, size\_t nb\_transactions)

Delete block transactions in the pending transaction (pdt) directory if the block is valid.

## 9.32.1 Function Documentation

# 9.32.1.1 add\_pending\_transaction()

Add a transaction to the pending transaction (pdt) directory.

## **Parameters**

```
transaction The transaction to add
```

Definition at line 140 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.32.1.2 convert\_data\_to\_transactiondata()

Convert serialized TransactionData\* to TransactionData\*.

## **Parameters**

transactiondata	The returned TransactionData*
fd	The serialized TransactionData FD

Definition at line 88 of file transaction.c.

Here is the caller graph for this function:

# 9.32.1.3 create\_new\_transaction()

Create a new transaction.

## **Parameters**

infos	Shared information object
type	The type of transaction
receiver_public_key	The receiver pkey
amount	The amount of PEPITAS
cause	The cause (deprecated)
asset	The asset (deprecated)

## Returns

# Transaction

Definition at line 157 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.32.1.4 flush\_pending\_transactions()

Delete block transactions in the pending transaction (pdt) directory if the block is valid.

transactions	block.blockdata.transactions
nb_transactions	number of transactions

Definition at line 204 of file transaction.c.

## 9.32.1.5 get\_transaction\_data()

Get the transaction data object.

Converts transactions to char \* buffer.

### **Parameters**

trans	The returned transaction
buff	The buffer with the serialized data
index	The buffer starting offset

Definition at line 40 of file transaction.c.

Here is the caller graph for this function:

# 9.32.1.6 load\_pending\_transaction()

Load a transaction in the pending transaction (pdt) directory.

## **Parameters**

times	stamp	The timestamp of the transaction

## Returns

Transaction\*

Definition at line 127 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.32.1.7 load\_transaction()

Load a serialized Transaction\* structure.

### **Parameters**

transaction	The returned Transaction*
fd	The serialized Transaction FD

Definition at line 117 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.32.1.8 write\_transaction()

Serialize a Transaction\* structure.

### **Parameters**

transaction	The Transaction* structure to serialize
fd	The output file FD

Definition at line 34 of file transaction.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.32.1.9 write\_transactiondata()

Serialize a TransactionData\* structure.

### **Parameters**

transaction	The TransactionData* structure to serialize
fd	The output file FD

Definition at line 3 of file transaction.c.

Here is the caller graph for this function:

# 9.33 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/blockchain/wallet.c File Reference

```
#include <time.h>
#include "blockchain/wallet.h"
```

```
#include "cryptosystem/rsa.h"
Include dependency graph for wallet.c:
```

# **Functions**

Wallet \* get\_my\_wallet ()

Get my wallet object.

• int create\_account ()

Creates an account in local and broadcasts the creation to the network.

void add\_money\_to\_wallet (size\_t money)

Add money to my wallet.

void remove\_money\_from\_wallet (size\_t money)

Remove money from my wallet.

void add\_money\_to\_stake (size\_t money)

Add money to my stake.

void remove\_money\_from\_stake (size\_t money)

Withdraw money from my stake.

# 9.33.1 Function Documentation

# 9.33.1.1 add\_money\_to\_stake()

Add money to my stake.

**Parameters** 

money	The amount of PEPITAS

Definition at line 45 of file wallet.c.

Here is the call graph for this function:

# 9.33.1.2 add\_money\_to\_wallet()

Add money to my wallet.

money	The amount of PEPITAS
-------	-----------------------

Definition at line 26 of file wallet.c.

Here is the call graph for this function:

## 9.33.1.3 create\_account()

```
int create_account ( )
```

Creates an account in local and broadcasts the creation to the network.

## **Returns**

0 if the broadcast succeeds, otherwise 1

Definition at line 18 of file wallet.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.33.1.4 get\_my\_wallet()

```
Wallet* get_my_wallet ( )
```

Get my wallet object.

Returns

Wallet

Definition at line 6 of file wallet.c.

Here is the caller graph for this function:

# 9.33.1.5 remove\_money\_from\_stake()

Withdraw money from my stake.

### **Parameters**

money	The amount of PEPITAS

Definition at line 54 of file wallet.c.

Here is the call graph for this function:

# 9.33.1.6 remove\_money\_from\_wallet()

Remove money from my wallet.

### **Parameters**

money	The amount of PEPITAS
-------	-----------------------

Definition at line 34 of file wallet.c.

Here is the call graph for this function:

# 9.34 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/cryptosystem/hash.c File Reference

```
#include <openssl/sha.h>
#include "cryptosystem/hash.h"

#include "cryptosystem/signature.h"
Include dependency graph for hash.c:
```

# **Functions**

```
    char * sha384_data (void *data, size_t len_data)
    Apply the SHA384 algorithm on a 'data' of size 'len_data'.
```

char \* hash\_block\_transactions (Block \*block)

Apply the SHA384 to all block transactions.

# 9.34.1 Function Documentation

# 9.34.1.1 hash\_block\_transactions()

```
\begin{tabular}{ll} $ char* hash\_block\_transactions ( \\ & Block * block ) \end{tabular}
```

Apply the SHA384 to all block transactions.

block	The block to deal with
DIOCK	THE BIOCK to deal With

### Returns

```
sha384[SHA384_DIGEST_LENGTH]
```

Definition at line 24 of file hash.c.

Here is the call graph for this function:

# 9.34.1.2 sha384\_data()

Apply the SHA384 algorithm on a 'data' of size 'len\_data'.

### **Parameters**

data	The buffer to hash
len_data	The length of the buffer

### Returns

char[97] (on heap)

Definition at line 6 of file hash.c.

Here is the caller graph for this function:

# 9.35 /home/runner/work/PEPITAS-Cryptocurrency/PEPITAS-← Cryptocurrency/src/core/cryptosystem/rsa.c File Reference

```

# Include dependency graph for signature.c:

# **Functions**

```
• char * sign_message (char *data, size_t len_data, void *buffer)
```

buffer <- encrypt(SHA284(msg,len\_data),wallet\_priv\_key)</pre>

- char \* sign\_message\_with\_key (char \*data, size\_t len\_data, RSA \*key, void \*buffer)
   encrypt(SHA284(msg,len\_data),key) buffer <- encrypt(SHA284(msg,len\_data),key)</li>
- int verify\_signature (void \*data, size\_t data\_len, char \*signature, RSA \*pub\_key)

Verifies if SHA384(data) == decrypt(signature,pub\_key)

• int verify\_block\_signature (Block block)

Verifies if a block signature is valid.

• int verify\_transaction\_signature (Transaction \*transaction)

Verifies if a transaction signature is valid.

void sign\_block (Block \*block)

Signs a block with my private key.

void sign block with key (Block \*block, RSA \*key)

Signs a block

void sign\_transaction (Transaction \*transaction)

Signs a transaction with my private key.

void sign\_transaction\_with\_key (Transaction \*transaction, RSA \*key)

Signs a transaction.

void sign\_block\_transactions (Block \*block)

Signs all transactions of a block with my private key.

# 9.36.1 Function Documentation

# 9.36.1.1 sign\_block()

Signs a block with my private key.

## **Parameters**

block	The block to sign
-------	-------------------

Definition at line 108 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.36.1.2 sign\_block\_transactions()

```
void sign_block_transactions ( {\tt Block} \, * \, block \, )
```

Signs all transactions of a block with my private key.

# **Parameters**

block	The block to sign

Definition at line 138 of file signature.c.

Here is the call graph for this function:

# 9.36.1.3 sign\_block\_with\_key()

Signs a block.

## **Parameters**

block	The block to sign
key	The key to use for the signature

Definition at line 115 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.36.1.4 sign\_message()

buffer <- encrypt(SHA284(msg,len\_data),wallet\_priv\_key)

If buffer == NULL, return a new allocated buffer

# **Parameters**

data	The data to sign
len_data	The length of the data
buffer	The buffer to put signature into

# Returns

char\*

Definition at line 10 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.36.1.5 sign\_message\_with\_key()

encrypt(SHA284(msg,len\_data),key) buffer <- encrypt(SHA284(msg,len\_data),key)

If buffer == NULL, return a new allocated buffer

## **Parameters**

data	The data to sign	
len_data	The length of the data	
key	The key to use for the signature	
buffer	The buffer to put signature into	

# Returns

char\*

Definition at line 34 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

## 9.36.1.6 sign\_transaction()

Signs a transaction with my private key.

## **Parameters**

transaction	The transaction to sign

Definition at line 122 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.36.1.7 sign\_transaction\_with\_key()

Signs a transaction.

## **Parameters**

transaction	The transaction to sign
key	The key to use for the signature

Definition at line 130 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.36.1.8 verify\_block\_signature()

```
\begin{array}{c} \text{int verify\_block\_signature (} \\ & \text{Block } block \text{ )} \end{array}
```

Verifies if a block signature is valid.

block The block to verify	
---------------------------	--

## Returns

1 if valid, 0 otherwise

Definition at line 83 of file signature.c.

Here is the call graph for this function:

# 9.36.1.9 verify\_signature()

```
int verify_signature (
     void * data,
     size_t data_len,
     char * signature,
     RSA * pub_key )
```

Verifies if SHA384(data) == decrypt(signature,pub\_key)

### **Parameters**

data	The buffer to verify
data_len	The length of the buffer
signature	The signature to compare with SHA384(data, len_data)
pub_key	The RSA public key used for the decryption

## Returns

int

Definition at line 57 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.36.1.10 verify\_transaction\_signature()

Verifies if a transaction signature is valid.

## **Parameters**

transaction	The transaction to verify
-------------	---------------------------

# Returns

1 if valid, 0 otherwise

Definition at line 95 of file signature.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.37 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/misc/files.c File Reference

```

## **Macros**

• #define \_GNU\_SOURCE

# **Functions**

char \* last\_file\_in\_folder (char folder\_path[])
 Return the last file (reverse alphabetical order) of a folder path.

# 9.37.1 Macro Definition Documentation

# 9.37.1.1 \_GNU\_SOURCE

```
#define _GNU_SOURCE
```

Definition at line 1 of file files.c.

# 9.37.2 Function Documentation

## 9.37.2.1 last\_file\_in\_folder()

Return the last file (reverse alphabetical order) of a folder path.

#### **Parameters**

folder_path	The path of the folder
-------------	------------------------

## Returns

char\*, return NULL if any error, must be freed!

Definition at line 7 of file files.c.

# 9.38 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/misc/safe.c File Reference

```
#include "misc/safe.h"
Include dependency graph for safe.c:
```

# **Functions**

• int safe\_write (int fd, const void \*buf, ssize\_t count)

Writes safely to a file descriptor.

• int safe\_send (int fd, const void \*buf, ssize\_t count)

Send safely to a file descriptor.

• ssize\_t safe\_read (int fd, const void \*\*buf, size\_t \*bufsize)

Reads safely in a file descriptor until '\r\n\r\n'.

• ssize\_t safe\_fread (void \*buffer, const size\_t size, const size\_t n, FILE \*file)

Calls 'fread' but safely !

# 9.38.1 Function Documentation

# 9.38.1.1 safe\_fread()

Calls 'fread' but safely!

buffer	The buffer to write on
size	The size of 1 read element
n	The number of elements to read
Generated t	가 취임역 FILE

## Returns

ssize\_t, -1 if error or the number of read items

Definition at line 58 of file safe.c.

Here is the caller graph for this function:

# 9.38.1.2 safe\_read()

Reads safely in a file descriptor until '\r\n\r\n'.

## **Parameters**

fd	The file descriptor
buf	The buffer which contains the message

## Returns

The number of byte the file 'fd', if -1 error

Definition at line 31 of file safe.c.

Here is the caller graph for this function:

# 9.38.1.3 safe\_send()

Send safely to a file descriptor.

### **Parameters**

fd	The file descriptor
buf	The buffer to write
count	The number of byte to write in fd

# Returns

Error code

Definition at line 17 of file safe.c.

Here is the caller graph for this function:

## 9.38.1.4 safe\_write()

```
int safe_write (
    int fd,
    const void * buf,
    ssize_t count )
```

Writes safely to a file descriptor.

### **Parameters**

fd	The file descriptor
buf	The buffer to write
count	The number of byte to write in fd

### Returns

Error code

Definition at line 3 of file safe.c.

Here is the caller graph for this function:

# 9.39 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/network/get\_data.c File Reference

```
#include "network/get_data.h"
Include dependency graph for get_data.c:
```

# **Functions**

- size\_t process\_header (char \*header, int sockfd, infos\_st \*infos)
- int fetch\_client\_list (char who, int fd)

Fetches the client list from a socket fd.

• size\_t read\_header (int sockfd, infos\_st \*infos)

Waits a header in 'sockfd', reads it and processes it.

• int read\_get\_blocks (int fd, infos\_st \*infos)

Read blocks from a sock fd.

size\_t read\_actual\_height (int fd)

Get the actual height of a node via its sock fd.

int read\_send\_block (int fd)

Read a socket sended block.

• int read\_vote (int fd, infos\_st \*infos)

Read a socket sended vote.

int read\_epoch\_block (int fd)

Read a socket sended epoch block.

• int epoch\_validation\_process (int blockfile, size\_t height, int id)

Epoch validation protocol.

• int read\_send\_pending\_transaction\_list (int fd, infos\_st \*infos)

Read a socket sended pending transaction list.

• int read\_send\_pending\_transaction (int fd, infos\_st \*infos)

Read a socket sended pending transaction.

• int read\_get\_pending\_transaction (int fd)

Get a socket sended pending transaction.

# 9.39.1 Function Documentation

# 9.39.1.1 epoch\_validation\_process()

Epoch validation protocol.

## **Parameters**

blockfile	The epoch FD
height	The epoch height
id	The epoch ID

## Returns

int

Definition at line 482 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.39.1.2 fetch\_client\_list()

Fetches the client list from a socket fd.

who	Tells if it is the server or the client side
fd	The socket fd

Returns

0 if sucess, -1 otherwise

Definition at line 107 of file get\_data.c.

Definition at line 3 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.39.1.4 read\_actual\_height()

Get the actual height of a node via its sock fd.

## **Parameters**

```
fd The sock fd
```

Returns

size\_t

Definition at line 186 of file get\_data.c.

Here is the caller graph for this function:

# 9.39.1.5 read\_epoch\_block()

Read a socket sended epoch block.

# Parameters

fd The socket fd

## Returns

int

Definition at line 420 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.39.1.6 read\_get\_blocks()

Read blocks from a sock fd.

## **Parameters**

fd	The sock fd
infos	Shared information

# Returns

int

Definition at line 155 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.39.1.7 read\_get\_pending\_transaction()

```
int read_get_pending_transaction ( \label{eq:condition} \text{int } fd \ )
```

Get a socket sended pending transaction.

### **Parameters**

```
fd The socket fd
```

# Returns

int

Definition at line 629 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.39.1.8 read\_header()

Waits a header in 'sockfd', reads it and processes it.

## **Parameters**

sockfd	The sock FD
infos	Shared information

## Returns

0 if sucess, -1 otherwise

Definition at line 136 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.39.1.9 read\_send\_block()

Read a socket sended block.

### **Parameters**

```
fd The socket fd
```

# Returns

int

Definition at line 193 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.39.1.10 read\_send\_pending\_transaction()

Read a socket sended pending transaction.

## **Parameters**

fd	The socket fd
infos	Shared information

### Returns

int

Definition at line 571 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.39.1.11 read\_send\_pending\_transaction\_list()

Read a socket sended pending transaction list.

## **Parameters**

fd	The socket fd
infos	Shared information

# Returns

int

Definition at line 549 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.39.1.12 read\_vote()

Read a socket sended vote.

fd	The socket fd
infos	Shared information

Returns

int

Definition at line 279 of file get\_data.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.44 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/validation/epoch\_man.c File Reference

```
#include "validation/epoch_man.h"
Include dependency graph for epoch man.c:
```

#### **Functions**

- RSA \* get\_epoch\_man\_pkey (BlockData \*block\_data)
  - Give the pkey of the creator of a block.
- char \* create\_vote\_data (Block \*block, char vote, int validator\_index, size\_t \*data\_length)
- void give\_punishments\_and\_rewards (Block \*last\_block, Block \*current\_block)

Add punishmnent and reward transactions to validators of the 'prev\_block' into 'current\_block'.

- void add\_pdt\_to\_block (Block \*block)
- Block \* create\_epoch\_block ()

Create a block object with the previous block hash & votes.

#### 9.44.1 Function Documentation

#### 9.44.1.1 add\_pdt\_to\_block()

Definition at line 94 of file epoch\_man.c.

Here is the call graph for this function: Here is the caller graph for this function:

### 9.44.1.2 create epoch block()

```
Block* create_epoch_block ( )
```

Create a block object with the previous block hash & votes.

See also

The function create a block based on the local last block

Returns

Block\*

Definition at line 141 of file epoch\_man.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.44.1.3 create\_vote\_data()

Definition at line 10 of file epoch\_man.c.

#### 9.44.1.4 get\_epoch\_man\_pkey()

```
RSA* get_epoch_man_pkey (

BlockData * block_data )
```

Give the pkey of the creator of a block.

#### **Parameters**

block_data	The created block data
------------	------------------------

#### Returns

RSA\*, NULL if the data is corrupted

Definition at line 3 of file epoch\_man.c.

Here is the caller graph for this function:

#### 9.44.1.5 give\_punishments\_and\_rewards()

Add punishmnent and reward transactions to validators of the 'prev\_block' into 'current\_block'.

#### See also

Number of added transactions = number of validators in 'prev\_block'

### **Parameters**

prev_block	The last validated block
current_block	The current block (in creation)

Definition at line 31 of file epoch\_man.c.

Here is the caller graph for this function:

# 9.45 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/validation/plebe.c File Reference

```
#include "validation/plebe.h"
Include dependency graph for plebe.c:
```

#### **Functions**

```
    int plebe_adhere_block (Block *block)
    Adhere a block, write it locally.
```

#### 9.45.1 Function Documentation

#### 9.45.1.1 plebe adhere block()

Adhere a block, write it locally.

#### **Parameters**

block The block to adhere	
---------------------------	--

#### Returns

0 if success, 2 if need to sync error, 1 if data corrupted error

Definition at line 7 of file plebe.c.

Here is the call graph for this function:

# 9.46 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/validation/validation\_engine.c File Reference

```
#include "validation/validation_engine.h"
Include dependency graph for validation_engine.c:
```

#### **Functions**

• Transaction \*\* validate\_transactions (Transaction \*\*transaction\_to\_validate, size\_t nb\_transactions, size\_t \*nb\_returned\_transactions)

Validate some transactions.

char plebe\_verify\_block (Block \*block)

For the plèbe, check block validity.

int comital\_validate\_block (Block \*block)

For the comital, check block validity.

int send\_verdict (Block \*block, char verdict)

Broadcast a verdict about a block validity to the network.

# 9.46.1 Function Documentation

#### 9.46.1.1 comital\_validate\_block()

```
int comital_validate_block ( {\tt Block} \, * \, block \, )
```

For the comital, check block validity.

#### **Parameters**

block	The block to check

Returns

int

Definition at line 242 of file validation\_engine.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.46.1.2 plebe\_verify\_block()

For the plèbe, check block validity.

#### **Parameters**

block	The block to check
-------	--------------------

#### Returns

int

Definition at line 199 of file validation\_engine.c.

Here is the caller graph for this function:

#### 9.46.1.3 send\_verdict()

Broadcast a verdict about a block validity to the network.

#### **Parameters**

block	The block awaiting validation	
verdict	The verdict : 0 -> "SHAME! The block is not valid at all", 1 -> "The block is valid for me"	Ì

#### Returns

0 if the broadcast suceed, -1 if not

Definition at line 305 of file validation\_engine.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.46.1.4 validate\_transactions()

Validate some transactions.

#### See also

The verification must take into account:

- Sender != receiver
- · If the sender signature is correct
- · If the sender exists in the blockchain and has enough money
- If the receiver exists
- If sender and receiver remaining money fields are correct

#### **Parameters**

transaction_to_validate	The transactions to validate
nb_transactions	The number of transactions to validate
nb_returned_transactions	The number of returned (valid) transactions

#### Returns

Transaction\*\*, the valid transactions

Definition at line 3 of file validation engine.c.

Here is the call graph for this function: Here is the caller graph for this function:

# 9.47 /home/runner/work/PEPITAS-Cryptocurrency/PEPITASCryptocurrency/src/core/validation/validators.c File Reference

#include "validation/validators.h"
Include dependency graph for validators.c:

#### **Macros**

- #define NB\_RSA\_CHUNK 2048 / 64
- #define HEADER\_VALIDATORS\_STATE\_SIZE 3 \* sizeof(size\_t) + sizeof(char) + (RSA\_KEY\_SIZE + 2 \* sizeof(size\_t) + sizeof(char)) \* validator\_id

#### **Functions**

- int define\_nb\_validators (size\_t n)
- char \* hash block transactions epoch (Block \*block)
- void init\_validators\_state ()

*Init the* validators.state file if it doesn't exists.

RSA \*\* get\_comittee (size\_t block\_height, int \*nb\_validators)

Get the a comittee RSA public keys on a specific epoch.

RSA \*\* get\_next\_comittee (int \*nb\_validators)

Get the a comittee RSA public keys on a specific epoch.

• ssize\_t get\_validators\_states\_total\_stake ()

Get the total stake of the network (parse 'validators.state')

ssize\_t get\_validators\_states\_nb\_validators ()

Get the number of validators of the network (parse 'validators.state')

ssize\_t get\_validators\_states\_block\_height\_validity ()

Get the validators states block height validity (parse 'validators.state')

ssize\_t get\_validator\_stake (size\_t validator\_id)

Get a validator total stake (parse 'validators.state')

ssize\_t get\_validator\_power (size\_t validator\_id)

Get a validator power (parse 'validators.state')

```
    RSA * get_validator_pkey (size_t validator_id)
```

Get the validator pkey as RSA\* (parse 'validators.state')

ssize\_t get\_validator\_id (RSA \*pkey)

Get the validator id in 'validators.state'.

int i\_am\_commitee\_member ()

Check if the current user is a member of the next comitee.

- ssize\_t \_create\_validator\_item (FILE \*validators\_states, struct validators\_state\_header \*updated\_
   validators\_state\_header, Transaction \*transaction, bool is\_key\_on\_sender)
- char update\_validators\_state (Block \*block)

Given a block, update the 'validators.state' with the transactions.

# 9.47.1 Macro Definition Documentation

# 9.47.1.1 HEADER\_VALIDATORS\_STATE\_SIZE

```
#define HEADER_VALIDATORS_STATE_SIZE 3 * sizeof(size_t) + sizeof(char) + (RSA_KEY_SIZE + 2 *
sizeof(size_t) + sizeof(char)) * validator_id
```

Definition at line 4 of file validators.c.

#### 9.47.1.2 NB\_RSA\_CHUNK

```
#define NB_RSA_CHUNK 2048 / 64
```

Definition at line 3 of file validators.c.

#### 9.47.2 Function Documentation

#### 9.47.2.1 \_create\_validator\_item()

Definition at line 296 of file validators.c.

[\*RSA]

Definition at line 135 of file validators.c.

Here is the caller graph for this function:

# 9.47.2.5 get\_validator\_id()

Get the validator id in 'validators.state'.

#### **Parameters**

```
pkey The RSA public key
```

#### Returns

ssize\_t, the validator index

Definition at line 247 of file validators.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.47.2.6 get\_validator\_pkey()

Get the validator pkey as RSA\* (parse 'validators.state')

#### Parameters

validator⊷	The id of the validator in 'validators.state'
_id	

### Returns

RSA\*

Definition at line 216 of file validators.c.

Here is the call graph for this function:

# 9.47.2.7 get\_validator\_power()

Get a validator power (parse 'validators.state')

#### **Parameters**

validator⊷	The id of the validator in 'validators.state'
_id	

#### **Returns**

ssize\_t

Definition at line 199 of file validators.c.

Here is the call graph for this function:

# 9.47.2.8 get\_validator\_stake()

Get a validator total stake (parse 'validators.state')

#### **Parameters**

validator⊷	The id of the validator in 'validators.state'
_id	

#### Returns

ssize\_t

Definition at line 182 of file validators.c.

Here is the call graph for this function:

# 9.47.2.9 get\_validators\_states\_block\_height\_validity()

```
{\tt ssize\_t~get\_validators\_states\_block\_height\_validity~(~)}
```

Get the validators states block height validity (parse 'validators.state')

### Returns

ssize t

Definition at line 168 of file validators.c.

Here is the call graph for this function: Here is the caller graph for this function:

#### 9.47.2.10 get\_validators\_states\_nb\_validators()

```
ssize_t get_validators_states_nb_validators ( )
```

Get the number of validators of the network (parse 'validators.state')

Returns

ssize t

Definition at line 154 of file validators.c.

Here is the call graph for this function:

### 9.47.2.11 get\_validators\_states\_total\_stake()

```
ssize_t get_validators_states_total_stake ( )
```

Get the total stake of the network (parse 'validators.state')

Returns

ssize t

Definition at line 140 of file validators.c.

Here is the call graph for this function:

# 9.47.2.12 hash\_block\_transactions\_epoch()

Definition at line 21 of file validators.c.

Here is the call graph for this function:

### 9.47.2.13 i\_am\_commitee\_member()

```
int i_am_commitee_member ( )
```

Check if the current user is a member of the next comitee.

Returns

The id in the comittee, -1 if you are not member of the comittee

Definition at line 281 of file validators.c.

Here is the caller graph for this function:

#### 9.47.2.14 init\_validators\_state()

```
void init_validators_state ( )
```

Init the validators.state file if it doesn't exists.

Definition at line 33 of file validators.c.

Here is the caller graph for this function:

# 9.47.2.15 update\_validators\_state()

```
char update_validators_state ( {\tt Block} \ * \ block \ )
```

Given a block, update the 'validators.state' with the transactions.

#### **Parameters**

block

#### Returns

0, -1 if the given block height is not 'validators.state' height + 1

Definition at line 333 of file validators.c.

Here is the call graph for this function: Here is the caller graph for this function:
